

Data Center

Precision Deployment. Assured Performance. Trusted Results.

The Challenge Is Execution, Not Design

Data center environments are built for performance, but too often they fall short due to inconsistent deployment, incomplete documentation, and fragmented ownership across vendors.

The margin for error shrinks as bandwidth demands increase. And issues like unverified connections, unmanaged capacity, and limited visibility both slow operations and introduce risk.

SQUAN brings structure to that complexity, delivering integrated solutions where every connection is validated, every asset is documented, and every environment is built to perform.

Built for Execution. Designed for Accountability.

SQUAN delivers deployment, connectivity, testing, and operational support across the full data center lifecycle.

As a single, accountable partner, we remove multi-vendor friction and ensure every asset is installed, validated, and fully documented.

Core Capabilities

✓ Infrastructure Build Services

Rack and stack, structured cabling, cable management, and power installation across greenfield and brownfield environments.

✓ Connectivity & Transport Services

Long-haul fiber deployment, ILA integration, and signal validation across transport networks.

✓ Assured Connectivity (Testing as a Service)

OTDR/OLTS testing, polarity validation, and certification to ensure performance and compliance.

✓ Audit and Compliance Services

Capacity audits, asset validation, and standards compliance to identify risk and optimization opportunities.

✓ Operational Services (Day 2+)

Remote hands, incident response, and ongoing support to maintain performance.

✓ Lifecycle Services (Moves, Adds, Changes & Decommission)

Moves, adds, changes, de-installations, and asset recovery with full chain of custody.

The SQUAN Advantage

Data center environments demand precision, accountability, and speed. SQUAN delivers on all three. From deployment through operations, we ensure your infrastructure is built correctly and consistently performs as expected.

We bring the same accountability and execution discipline from the outside plant into the data center. And our national reach and unmatched agility mean we're here to help wherever you need us.

What Sets SQUAN Apart

We Deliver Turnkey Solutions

SQUAN owns the full lifecycle, eliminating gaps between vendors and ensuring a complete, working environment.

We Validate Everything

Every connection is verified to meet performance standards before going live.

We Deliver Operational Visibility

Clear documentation provides full visibility into assets, capacity, and performance.

We Reduce Risk Before It Arrives

Audit insights and validation processes identify issues early and prevent downstream impact.

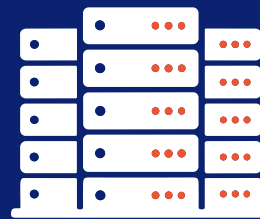

We Scale With You

Backed by engineering, construction, and power expertise, we support expansion across complex infrastructure environments.

We Own the Outcome

Instead of managing vendors, you're working with a partner that is accountable for results.

Build, connect,
validate, and support
your environment
